JAIME MARTINEZ DOMINGUEZ

Data Engineer

Madrid, Spain | jaimemartinezdst@gmail.com | linkedin.com/in/jaime-martinez-dominguez | github.com/jaimemartinezd | jaimemartinezd.github.io

CAREER SUMMARY:

Software Engineering graduate from UPM currently working as a Data Engineer at NTT DATA. Hands-on experience with Python, SQL (Oracle), ETL and data integration, complemented by academic experience in machine learning and deep learning. Interested in modern data architectures and cloud-native data solutions, with a strong foundation in algorithms, statistics and data processing. Currently expanding into Databricks and Google Cloud.

WORK EXPERIENCE:

NTT DATA - Madrid, Spain

Junior Data Engineer September 2026 – Present
Data Engineer Student January 2026 – May 2026

- Developed and maintained SQL-based data workflows on Oracle.
- Built complex IBM DataStage ETL jobs.
- Designed batch scheduling and monitored jobs with Control-M.
- Tested jobs across development environments.
- Collaborated with cross-functional teams to support data integration.

RELEVANT PROJECTS:

ETL Development - Client Data Platform (NTT DATA)

- Designed and developed large-scale IBM DataStage ETL jobs with 100+ stages for a client data platform, implementing complex business transformations and derived fields using Transformer, Lookup, Join, Aggregator and Funnel stages.
- Integrated 5+ data sources, ensuring data validation and consistency across the pipeline.
- Took the jobs from development through testing to production deployment, validating output data against source systems.
- Designed and optimized SQL DDL scripts for data schema management and maintainability.

Brain Tumor Detection using Convolutional Neural Networks - Machine Learning Project | github.com/jaimemartinezd/Brain_Tumor_CNN

- Designed and implemented an image classification pipeline for brain tumor detection (4 classes) using transfer learning with EfficientNetB0 in TensorFlow.
- Applied preprocessing techniques including resizing, normalization and data augmentation on grayscale MRI datasets.
- Built and trained deep learning models in Python, evaluating performance across multiple tumor categories and achieving a 0.96 F1-score on the validation set.

EDUCATION:

2022 - 2026 | Universidad Politécnica de Madrid (UPM)
Bachelor of Computer Science - Software Engineering

CERTIFICATIONS:

Machine Learning & Deep Learning (76 h) - Cátedra +O (Orange) in Artificial Intelligence, UPM — Jun 2025
C1 Advanced - Cambridge English — Jul 2021

SKILLS:

Programming	Python, SQL, Java
Data, ETL & tools	IBM DataStage, Oracle Database, Control-M, Git
Currently learning	Databricks, Google Cloud Platform
Languages	Spanish (native), English (C1)
Other	ML & Deep Learning basics (TensorFlow), Data Structures, OOP, Algorithms
